

Pain management

1 research consensus panel

5 grants funded

Talosix (BMM) Vertebral compression fracture (VCF) Registry

- ▶ The registry collected outcomes data for vertebral augmentation procedures and provided a standardized approach to submit information to meet the requirements of the local coverage decision by Noridian Healthcare Solutions (NHS).
- ▶ This was a joint collaboration between SIR Foundation and Talosix between 2016–2018.

Talosix (BMM) Sacroplasty Registry

- ▶ The registry collects outcomes data on sacral fractures to evaluate the effectiveness of sacroplasty. There is limited research on sacroplasty, and the procedure is not commonly performed due to lack of reimbursement. SIR Foundation is recruiting additional sites that perform 1–2 sacroplasty procedures per month to participate in the Sacroplasty Registry.
- ▶ This is a joint collaboration between SIR Foundation and Talosix that started in 2018 and is ongoing.
