Minimally Invasive Sympathetic Denervation: Expanding Applications, Indications and Techniques

Assessing renal ablation outcomes:

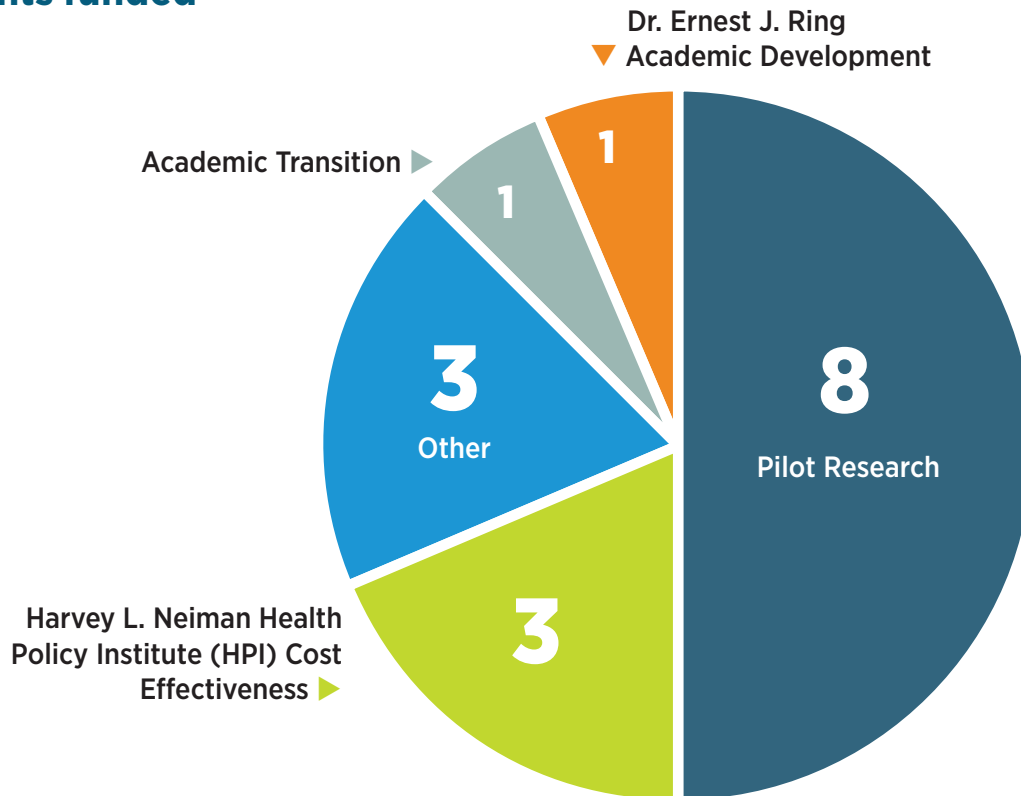

► **The Ablation of Renal Masses Outcomes Registry (ARMOR)** is a multi-institutional, international registry that aims to improve outcomes and safety for patients undergoing ablative therapy for solid renal masses using standard quality of life measures. This prospective registry is focused on improving

our understanding of computed tomographic and magnetic resonance imaging findings after renal ablation in order to optimize procedural and imaging techniques that will influence outcomes.

► SIR Foundation has supported ARMOR since 2011.

16 grants funded

HIGHLIGHTS:

In 2011, **Jeremy C. Durack, MD, MS, FSIR**, developed the Renal Interventional Oncology (IO) Registry for which SIR Foundation provided \$100,000 in funding. The registry has completed enrollment of 1,000 patients and Dr. Durack is finalizing imaging collection from participating sites as of 2021.
